

Tutor Feedback- Reflective Activity Ethics in Computing

Hi Sahib,

I hope you are well and thank you for emailing your submission to me.

Please see my constructive feedback below:

- You need to cite in your academic writing. Noted you have added the research paper reference at the end of the discussion, but you need to cite where it is used in your writing as well as part of the academic discussion. Although you are critiquing two papers, this does not stop you from drawing through additional general theoretical concepts to add critical debate to your discussion. Any academic writing needs that opportunity for citation to occur, to ensure that the content is fully academic in tone. Where research or a fact is discussed cite it as this information came from somewhere. Not citing makes the paper look as though you are just using your own personal knowledge/intrinsic knowledge or common knowledge about the subject.
- Good to see that you discuss limitations and positives in your content. You need to reflect a 'pros' and 'cons' discussion through each paragraph however, as opposed to stated 'cons' in one paragraph and the 'pros' in another - synthesise your discussion fully and this will develop critical debate. There is some critical discussion occurring but develop your approach here further for your actual summative submissions and future formative, [which become artefacts for the e-portfolio]. Your discussion is stronger in paper 1 than paper 2 and so do get that consistency working all the way through for future formative/ summative.
